

Sun-Times Building

THE HOME of the *Chicago Sun-Times* newspaper was completed in 1957 at a prominent bend in the Chicago River. Using the river as well as underground railroad lines on the other side of the building to deliver rolls of paper and other

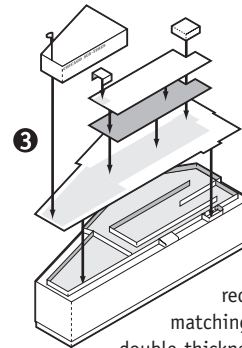

raw materials to the basement printing presses, the Sun-Times was one of the most modern newspaper facilities when it opened. Over the years its luster faded until it became widely reviled as the ugliest building in Chicago. It was torn down in 2005 to make way for the 1360' tall Trump Tower hotel and condominium skyscraper.

1 First, fold and assemble the large wall section. Fold the tiny roof outward over the building entrance, then add the first floor wall, glued inside the bottom of the large wall.

2 Add the roof, inset just a little from the top of the walls. Then glue the long thin walls by matching A-A, B-B, etc. Fold the tiny greenhouse into shape and glue it at C-D, and the tiny glass porch at E-F.

3 Glue the rectangular roof to its matching piece to create a double-thickness of cardstock. Glue in place on the upper roof. Next, add the top section with the flagpole. Finally, add the tiny roof access house and the gray air-conditioning unit.
